

### Grading criteria

Points	Categories	
5 pts	Report structure & writing style (all sections)	Clear structure (sections, subsections, etc.)
		Overall flow (reading flow, argumentation, etc.)
		Overall writing (clear, concise, complete)
		Scientific style and readability, correct spelling & grammar
10 pts	Theory ( <i>Introduction and Methods for explainable and interpretable AI</i> )	Relevant theoretical background (Not too much, not too little, important?)
		Theoretical background correct and coherent (clear, includes examples, to the point)
5 pts	Methodology ( <i>Modeling</i> )	Description of dataset
		Clear description of modelling considerations and steps
		Correct implementation
10 pts	Results	Correct account of results
		Good choice of visualisations
		Correct / logical choice of reported results and metrics to discuss performance & interpretability
10 pts	Discussion and conclusion	Interpretation of results and comparison between results (clear, concise, complete)
		Contextualisation of results in the broader perspective and socio-ethical implications
		Limitations and future work (what could be interesting to look at with this dataset, etc.)
		Summary
5 pts	Code	Correct code implementation
		Clear and annotated code
5 pts	Literature	Appropriate literature used
		Correct citation (consistent style, nothing left out in reference list, etc.)
	Overall	Independent work
		Originality and level of difficulty
